Dr. Chantinott Jittawiriyakoon
Dean
Graduate School of eLearning (GSeL)
Welcome to the Graduate School of eLearning (GSeL).

All Masters Programs (2/2015) are heading second semester. In case you need any advice or help about proctoring please use the contact information given below.

Methodology program is awarded PhD in eLearning Methodology in USA. The Graduate School of eLearning (GSeL).

GSeL: New Academic Calendar for 2015-2016
Vol. 5: Issue 2
February, 2016

*This calendar is subject to change without notice. For further details contact your Program Director

Vol. 6: Issue 2
February, 2017

From The Editor
Welcome to the 2nd edition of the eNewsletter 2016. In this second issue you will find a collection of interesting articles about academia, eLearning and technologies. Adobe Captivate Prime is a ground breaking new Learning Management System (LMS) from Adobe. Please read why it claims to be revolutionary? Please read about "deep learning" and how Artificial Intelligence (AI) will shape the future of Internet. An interesting article by Jonah Newman and Soo Oh lists 8-things we should know about MOOCs and their current usage in USA. A brief article by Alison Carr-Chelman on "Transforming Education with Technology". Call for papers for 3 upcoming conferences are also provided. Please check out other regular items and send your queries, contribution about this newsletter to DrKuldeep@Live.Com

Welcome to the CES 2016 show in Las Vegas, Nevada last week. It was a wild ride, and very exciting. The show is only open to press and industry insiders to get a sneak peak at innovations that we all may be buying in the coming years. The show is wide ranging from phone cases to any kind of audio accessory you can imagine. There are automatic cat litter boxes and fit bits for your dog. Technology for home, baby, beauty, and any kind of business solution you could possibly want. Remarkably, the area of the show reserved for "educational technology" had almost nothing located in it that resembled advanced educational technology. Opting instead for sections like "wearables & gaming," and "virtual/augmented reality" most vendors seemed to eschew the traditional title of educational technology.

Samsung showed off a concept in 2015 of a truck mounted with screens and cameras so drivers on the road behind are able to see it if it’s safe to overtake – but it didn’t say if it would actually build them.

Artificial Intelligence (AI) is Transforming Google Search, The Rest of the Web is Not
Cade Metz

Yesterday, the 46-year-old Google veteran who oversees its search engine, Amit Singhal, announced his retirement. In short orders: Google revealed that Singhal’s rather enormous shoes would be filled by a man named John Giannandrea. On one level, these are just two guys doing something new with their lives. But you can also view the pair as the ideal metaphor for a momentous shift in the way things work inside Google—across the tech world as a whole.

Giannandrea, you see, oversees Google’s work in artificial intelligence. This includes deep neural networks, networks of hardware and software that approximate the web of neurons in the human brain. By analyzing vast amounts of digital data, these neural nets can learn all sorts of useful tasks, like identifying photos, recognizing commands spoken into a Smartphone, and, as it turns out, responding to Internet search queries. In some cases, they can learn a task so well that they outperform humans.

They can do it better.
They can do it faster.
They can do it at a much larger scale.

8 Things You Should Know About MOOCs
Jonah Newman and Soo Oh

Before Harvard and MIT released data last month on their first 16 edx MOOCs, we already knew a few things:
Millions of people register for massive open online courses, and fewer receive certificates of completion.
Most MOOC participants are male.
College students are underrepresented.
But there is a lot we didn’t know, especially about who took different types of MOOCs and how much of the course content they viewed.

This information may be valuable to those looking to design and lead successful MOOCs.
Here’s what we’ve learned from this first data release covering more than half a million learners.

1. The overwhelming majority of MOOC students are male.
A majority of college and university students in the U.S. are female, but MOOCs flip that balance and then some. And in some courses, like engineering and computer science, participants are almost entirely male.

MOOCs
Female = 24%
Male = 76%

Introducing A Brand New LMS from Adobe – Adobe Captivate Prime
Adobe Captivate Prime is a ground breaking new Learning Management System (LMS) from Adobe aligned to modern business needs. Prime provides a one-of-a-kind learner experience, combining engaging gamification with advanced simple learner interface – a unified fluidic player that adapts to serve every major type of media seamlessly. It was designed from the ground up with the learner in mind, and reacts to a strong demand in the LMS market to serve the needs of administrators and L&D teams. Most importantly, Adobe Captivate Prime easily provides actionable data that administrators can rely upon to tell them how effectively and how quickly their workforce is upskilling in order to align to their business goals.

THOUGHT FOR THE MONTH
Love, friendship, respect, do not unite people as much as a common hatred for something.

Anton Chekhov
Short-story writer and dramatist (29 Jan 1860-1904)
